

Measure Before Your Appointment

What to bring for a faster design and more accurate quote

To help us create a more accurate layout and save time during your appointment, please bring basic measurements, photos, and appliance information if available.

Not sure how to measure? Our team offers complimentary on-site measurements to ensure accuracy and a seamless design process.

1. Overall Room Measurements

What to measure:

- Each wall length
- Ceiling height
- Any soffit / bulkhead height
- Any corners, returns, or open ends

Why this matters:

These measurements help us understand the basic shape of your space and build the first layout correctly.

Simple tip:

Measure wall lengths from corner to corner in inches.

2. Windows and Doors

What to measure:

- Window width and height
- Distance from floor to bottom of window
- Distance from the nearest wall to the edge of the window
- Door width and height
- Door swing direction
- Distance from the wall to the door trim

Why this matters:

Windows and doors affect cabinet height, countertop line, appliance placement, and traffic flow.

3. Ceiling Details

What to measure:

- Finished ceiling height
- Any lowered ceiling area
- Soffits or boxed-out sections
- Beams if visible

Why this matters:

This determines whether full-height cabinets, stacked cabinets, crown molding, or special trim can be used.

4. Plumbing Locations

What to measure:

- Sink centerline
- Water supply and drain location
- Dishwasher location
- Refrigerator water line if applicable

Why this matters:

Plumbing locations affect sink base size, dishwasher placement, and overall kitchen function.

Simple tip:

If possible, measure from the nearest wall to the center of the plumbing.

5. Electrical and Gas Locations

What to measure:

- Stove/range outlet or gas line location
- Major outlets and switches
- Hood vent location
- Microwave outlet if applicable
- Island power location if applicable

Why this matters:

Electrical and gas points impact appliance layout and cabinet design.

6. Appliance Sizes and Positions

What to bring:

- Refrigerator width × height × depth
- Range width
- Dishwasher width
- Microwave size
- Wall oven size
- Hood size
- Sink size if already selected

Why this matters:

Cabinet design must match the exact appliance sizes to fit correctly.

Tip:

A photo of the appliance model tag is very helpful.

9. Inspiration Images

Helpful items:

- Pinterest photos
